Learn how to save money while being more energy and resource efficient in and around your home! From your furnace to your yard, there are several ways energy and resources can be used more economically!

Topics covered will include and go beyond obtaining a home energy audit, the most economical ways to insulate your home, proper chemical disposal, the value of food waste and composting, soil quality restoration, rain garden installation and funding sources for water quality improvement projects.

Join us for an informative conversation about all of the ways you can positively affect the efficiency of your home and yard!

Refreshments will be served.
